

Calculating your Paver Requirements

A Guide to calculating your paver requirements

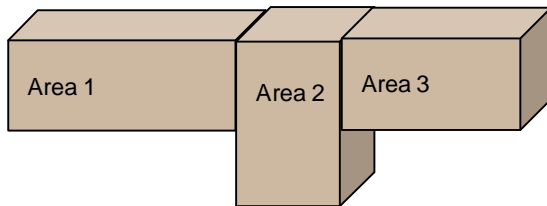

Paver coverage is affected by a number of factors, including the coverage area and size of paver. If you are unsure about your requirements, please visit your nearest Bunnings store for assistance. We cannot accept any responsibility if you under or over order.

To determine how many pavers you require for your project, you will need to:

1. **Measure the Length and Width of the area to be paved.**
2. **Calculate the total area in square metres by multiplying the length by the width:**
 - If your areas is a basic square or rectangle space, use:
Length (m) x Width (m) = Area (m²)

or odd or unusual shapes, break the area into sections :

Eg.

- 1) L x W x D = Area (cubic m)
- 2) L x W x D = Area (cubic m)
- 3) L x W x D = Area (cubic m)

Total = Area (cubic m)

Calculating your Paver Requirements

For triangular areas, use these calculations:

$\frac{1}{2}$ Base(m) x Height (m) = Area (m²)
Eg. $\frac{1}{2}$ x 3m x 5m = 7.5m² +10% extra pavers for wastage such as cuts and breakages.

3. Make an appropriate allowance for irregular shaped areas or curved edges
4. Determine the number of pavers required. Add 10% to this figure to allow for mishaps and offcuts.

Here's a guide to how many of each paver type you will need to lay ONE SQUARE METRE

Paver	Paver Size (L x W)	Number of Pavers required per m ²
Pebble Mesh Tiles	300 x 100mm	34
	300 x 300mm	11
Click together Pavers	300 x 300mm	11
Natural Stone Pavers	300 x 300mm	11
	600 x 300mm	6
